JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volume 130, Numbers 1–2, 1 May 2001

Contents

C. Conti and R. Morandi
The bidimensional interproximation problem and mixed splines 1

M. Dall'Aglio
The Dubins–Spanier optimization problem in fair division theory 17

A.-S. Chibi
Defect correction and domain decomposition for second-order boundary value problems 41

M. Cramer and L. Rüschendorf
Convergence of two-dimensional branching recursions 53

G.N. Elnagar and M.A. Kazemi
Numerical solution of time-delayed functional differential equation control systems 75

P. Martín, A. García and D.J. López
Modified Taylor approximation of functions with periodic behaviour 91

Y. Saad and J. Zhang
Enhanced multi-level block ILU preconditioning strategies for general sparse linear systems 99

R. Wegmann
Fast conformal mapping of multiply connected regions 119

R. Wegmann
Constructive solution of a certain class of Riemann–Hilbert problems on multiply connected circular regions 139

I.M. Stamova and G.T. Stamov
Lyapunov–Razumikhin method for impulsive functional differential equations and applications to the population dynamics 163

M.S. Abou-Dina
Nonlinear transient gravity waves due to an initial free-surface elevation over a topography 173

B. Kalantari and S. Park
A computational comparison of the first nine members of a determinantal family of root-finding methods 197

W.J.H. Stortelder, J.J.B. de Swart and J.D. Pintér
Finding elliptic Fekete points sets: two numerical solution approaches 205

Y. Song
Semiconvergence of block SOR method for singular linear systems with p-cyclic matrices 217

H. MacMullen, J.J.H. Miller, E. O'Riordan and G.I. Shishkin
A second-order parameter-uniform overlapping Schwarz method for reaction–diffusion problems with boundary layers 231

X.-s. Yang
Density-driven compactional flow in porous media 245

T. Ooura
A continuous Euler transformation and its application to the Fourier transform of a slowly decaying function 259

X. Wang
On generalized invariant cubature formulae 271

K. Al-Khaled
Sinc numerical solution for solitons and solitary waves 283

F. Sun and P. Kosmol
A new simultaneous method of fourth order for finding complex zeros in circular interval arithmetic 293

S.H. Lui
On accelerated convergence of nonoverlapping Schwarz methods 309

M. Durán, M. Miguez and J.-C. Nédélec
Numerical stability in the calculation of eigenfrequencies using integral equations 323

G. Boros and V.H. Moll
The double square root, Jacobi polynomials and Ramanujan's Master Theorem 337

C.-S. Chien and Y.S. Liao
Multiple bifurcations generated by mode interactions in a reaction–diffusion problem 345

I.K. Argyros
A new semilocal convergence theorem for Newton's method in Banach space using hypotheses on the second Fréchet-derivative (*Letter to the Editor*) 369

M.J. Kaiser
Generalized intersection and projection bodies 375

I. Khan and R. Ohba
Corrigendum to: "Closed-form expressions for the finite difference approximations of first and higher derivatives based on Taylor series" [J. Comput. Appl. Math. 107 (1999) 179–193] (*Corrigendum*) 385
